RESEARCH INTERESTS

Data-Driven Modeling and Decision Support for Air Transportation Systems

- Airport Operations: Capacity analysis, delay prediction, and operational performance evaluation
- Air Traffic Management: Aircraft trajectory analysis, taxi time prediction, and flight efficiency assessment
- Passenger Flow Management: Passenger flow modeling, queue forecasting, and congestion analysis
- Simulation and Decision Support: Airport simulation, scenario analysis, and data-driven operational planning

EDUCATION

Korea Aerospace University *Sep 2023 – Present*
Ph.D. Student in Air Transportation (Advisor: Dr. Hojong Baik) *Goyang, South Korea*
GPA: 4.0/4.0 (4.35/4.5)
Research focus: Airport operations, capacity analysis, airport simulation, and data-driven forecasting
Key courses: Airport Planning, Transportation Planning, Deep Reinforcement Learning, Special Aviation Weather Reports, Advanced Neural Networks, Machine Learning with Python, Optimization Theory and Applications

Korea Aerospace University *August 2023*
M.S. in Air Transportation (Advisor: Dr. Hojong Baik) *Goyang, South Korea*
GPA: 4.0/4.0 (4.5/4.5)
Key courses: Introductory Applied Machine Learning, Airport Design with Simulation, Advanced Discrete Choice Theory in Transportation, Theory and Application of Data Mining, Airlines Operations Control

Korea Aerospace University *August 2021*
B.S. in Air Transportation *Goyang, South Korea*
GPA: 3.77/4.0 (4.05/4.5)
Key courses: Air Traffic Management, Airspace System Analysis, Air Transportation System Analysis, Aviation Weather Service, Flight Operation Planning & Control, Computer Applications for Air Transportation Studies, Airport Operations

WORK EXPERIENCE

Research Intern *Jan 2025 - Feb 2025*
Incheon International Airport Corporation, Airport Research Institute *Incheon, South Korea*

- Analyzed airport operations and traffic patterns under peak and non-peak periods.
- Developed data-driven models for terminal-congestion forecasting and aircraft variable taxi times (VTT) prediction using operational data from Incheon International Airport.

Graduate Research Assistant *Sep 2021 - Present*
Air Transportation Simulation and Optimization Lab, Korea Aerospace University *Goyang, South Korea*

- Conducted simulation-based assessments of airport capacity, operational efficiency, and safety.
- Evaluated airport development and expansion scenarios in terms of delays, safety, and economic feasibility.
- Analyzed aircraft trajectories to identify Continuous Descent Operations (CDO) and Continuous Climb Operations (CCO) and assess fuel efficiency.

Undergraduate Research Assistant *Jul 2019 - Sep 2019*
Air Transportation Modeling and Control Lab, Korea Aerospace University *Goyang, South Korea*

- Analyzed airline fleet data to characterize fleet composition and operational patterns.
- Reviewed international Air Traffic Flow Management (ATFM) practices to inform potential implementation in South Korea.

PROJECT EXPERIENCE

Airport Integrated Information System Enhancement *Sep 2025 - Mar 2026*
Incheon International Airport Corporation *Incheon, South Korea*

- Analyzed flight schedules, passenger flows, queue lengths, and waiting times to characterize airport operational performance.
- Developed and validated a CAST-based passenger terminal simulation model to support operational planning.

Strategic Planning for Airport Hub Competitiveness *Oct 2025 - Dec 2025*
Incheon International Airport Corporation *Incheon, South Korea*

- Assessed airport delays under varying passenger demand and capacity conditions.
- Evaluated operational performance to support strategic airport planning and competitiveness analysis.

Passenger Terminal Simulation Model Development *Jul 2025 - Dec 2025*
Incheon International Airport Corporation *Incheon, South Korea*

- Developed MATLAB-based simulation models of airport departure processing facilities using operational data.
- Quantified queue lengths and waiting times under varying passenger demand and processing capacity.

Apron Congestion Mitigation through Variable Multiple Taxiway Operations *Jul 2025 - Dec 2025*
Korea Airports Corporation *Seoul, South Korea*

- Modeled aircraft ground movements and apron congestion using TAAM simulation.
- Evaluated alternative taxi-line configurations to assess congestion mitigation and surface operational efficiency.

Master Plan for Incheon International Airport *Sep 2022 - Aug 2024*
Incheon International Airport Corporation *Incheon, South Korea*

- Estimated runway and passenger terminal capacity using TAAM and CAST simulation models.
- Evaluated airport expansion scenarios in terms of capacity, congestion, delays, and economic feasibility.

Performance-Based Navigation Flight Procedure Maintenance and Evaluation *Sep 2021 - Dec 2021*
Ministry of Land, Infrastructure and Transport *Sejong, South Korea*

- Analyzed historical aircraft trajectories to identify CDO and CCO.
- Evaluated the fuel efficiency of identified CDO and CCO flight operations.

AWARDS AND ACHIEVEMENTS

Best Paper of Session Award, AIAA DATC/IEEE Digital Avionics Systems Conference		*Fall 2026*
Academic Merit Scholarship, Korea Aerospace University	$4,520	*Fall 2021*
2nd Place in Capstone Design Competition	$260	*Fall 2020*
2nd Place in ICT Startup Makerthon	$740	*Fall 2019*
Academic Merit Scholarship, Korea Aerospace University	$841	*Fall 2019*
Academic Merit Scholarship, Korea Aerospace University	$739	*Fall 2016*

TECHNICAL SKILLS

Programming	Python, MATLAB, LaTeX
Frameworks	PyTorch, NumPy
Simulation Tools	TAAM (Total Airspace and Airport Modeller), CAST (Passenger terminal simulation)
